

# M3T: Morphable Multithreaded Memory Tiles

## New Ideas

- Coarse grain polymorphism
- Polymorphism at all system levels
- System morphs on application demand

## Impact

- Morphable system that adapts to changing mission demands
- Applicable to a wide range of defense systems
- Commercialization path to leading US industry.

## Schedule

- End of six months:** Microarchitecture defined and simulated
- End of 12 months:** Synthesis tools, compiler, and morphware running
- End of 18 months:** Complete polymorphous system emulated on Blue Gene
- End of 24 months:** Complete polymorphous system simulated

**Organization name:** University of Illinois

**PI (s) names:** J. Torrellas, B. Abbott, T. Bapty, R. Bassett, H. Franke, D. Ngo and J. Moreira
